

Grace Cancer Foundation is celebrating completion of 6 years. On this 6th anniversary, we invite you to experience our journey thus far, milestones achieved and the path ahead.

Our Vision & Mission lays on core values of CARE, CURE, COMPASSION & COMMITMENT. On this memorable occasion we wish to celebrate our joy with you and share the excitement of making a difference to someone's life through care and compassion. This souvenir is a tribute to CANCER CONQUEST and our seamless efforts to intervene through Prevention Awareness, Early Detection, Diagnosis, Treatment and Support.

The carefully crafted content reveals the reality in dealing with cancer and takes you on a virtual tour of our 6 year experiences in touching **6Million** lives. In dealing with Cancer, a dedicated team of healthcare professionals who apply modern science, technology and willing to run the extra mile beyond their call of duty is our USP and success factor. Please join us in leading this effort further and bring a meaningful change.

Cancer can touch you, but not your soul; neither your thoughts, nor your heart...

“Cancer” – the most frightening and intimidating word that anyone can hear has caught our imagination like no other disease or medical condition did. Curing cancer will remain one of the most gratifying accomplishments of human ingenuity. The dual efforts to detect the disease early and the tremendous advancements in medicine is helping us to catch the disease early and treat with curative intent. Such advancements and efforts notwithstanding, the poor and the rural population continue to bear the brunt of cancer and succumb to the disease at much higher rates than those who have access to more robust medical care.

Grace Cancer Foundation was started six years ago to address this fundamental gap of providing quality access to early detection and offering objective treatment pathways to rural populations. What started as a small initiative then with some of the founders' own funds and funds collected from a few noble souls has become a movement today. A movement that is backed by more than 3000+ active volunteers with a global reach in 4 continents and 10 countries. The journey from a simple ambition to a movement, has touched more than 6 million citizens through more than 850 cancer awareness/screening camps.

Nothing of this sort would have been even remotely possible without the extra-ordinary generous support of our corporate and individual patrons; scores of doctors and volunteers including school going children who conducted their own fund generation music and art camps for Grace; Government officials and above all, hundreds of villages who opened their doors and hearts to us. While accolades from Guinness and Limca make us happy, our true joy lies in the results that we have been able to generate – such as – early detection of breast cancer in more than 375 people or identifying more than 285 groups with high risk of cervical cancer. These outcomes are what we are incredibly proud of more than any award. The real-life stories of cured parents and children, uncles and aunts, grandparents and friends are our sources of inspiration.

We enter our 7th year of operation as a stronger foundation with better infrastructure (4 world class mobile screening buses) and enhanced ability to attract more volunteers and doctors to support this noble cause. As we touch this important milestone, we also renew our solemn pledge to be of service to the larger humanity – especially those who are less fortunate than many of us economically – by providing them with world class medical facilities at their doorstep to detect cancer early.

As always, we seek your continued support, wishes and participation.

Dear colleague,

Thank you for making 2019 a spectacular year.

2019 was another year of relentless pursuit of service excellence for Grace Cancer Foundation. Grace Cancer Foundation (GCF) report summarizes the improvements in clinical outcomes, impact on society, new initiatives in Cancer screening and awareness and new research initiatives. This report allows us to share the achievements of our team and the recognition received by the Grace foundation.

More than 6 Million people were touched by Grace Cancer foundation till now. In the past year about 375 breast cancers were screen detected and treated. More than 285 Cervical cancers detected by Pap based screening.

What started as a humble cancer screening beginning has now catapulted into a pink revolution impacting lives of millions. We are proud to announce addition of 4 Mobile Cancer Screening buses to our fleet.

Grace Cancer Foundation has won the prestigious Guinness World Record for creating awareness on Oral Cancer, Feb 2019.

The second edition of Global Cancer Run was held on 13th October, 2019 with more than 10000 participants at Hyderabad. Also, simultaneously the run was held at Nizamabad, Kakinada, Davangere, Sydney, Nasik, Mumbai, Chile and Las Angels with more than 15000 participants.

Grace Cancer Foundation has organized the Nation's largest Cancer Run on 7th October 2018 with more than 7000 participants joining hands in cancer awareness.

Grace foundation was the winner of Guinness world record for largest simultaneous Self-examination for Breast Cancer consisting of 2790 participants on 20th February 2016. Grace Cancer foundation won the prestigious Limca book of records-2016 for conducting largest number of PAP smears for Cervical Cancers on a single day consisting of 1250 Liquid Based PAP smears.

It is a matter of immense pleasure to declare that Grace Foundation has conducted International conference and Workshop for research on the Impact of EMF Emission from Mobile Towers and Handsets in association with IIT Delhi at IIT CAMPUS in June 2016.

Grace cancer foundation has received prestigious ISO 2009 Certifications for the systems and processes in conducting Cancer Screening.

Grace has gone global by stepping footprint in 4 Continents and 10 Nations.

Significant impact on other Non-communicable diseases like Diabetes, Hypertension was achieved. Lifestyle modification was adopted by thousands of people.

Thousands of people were detected to have Diabetes and Hypertension for the first time during screening Camps. Grace Mobile Cancer Screening campaign has been very successful in reaching out to the unreached. Mobile Cancer Screening is done at the doorstep of the underprivileged. Thus far more than 5 lakh people have been screened.

In 2020, we shall continue to lead the pink revolution.

- Dr. Chinnababu Sunkavalli

THE VISIONARY

Dr. Chinnababu Sunkavalli

I extend a warm welcome to join us on the occasion of the 6 glorious year's journey of Grace Foundation. GRACE Cancer Foundation is a non-Profit organization registered under section 25(1) of the company's act of India. GRACE Cancer Foundation was started with a noble vision to alleviate cancer burden through Education, Early Detection, Treatment, Rehabilitation and Research.

We wanted to provide access to quality cancer screening and treatment right at the door step of the rural masses through outreach initiatives.

A vision driven by a small team evolved as a confluence of like-minded individuals who kindle the same passion of alleviating human suffering.

What really has fueled us through 6 year journey is cherishing the smiles on the lives of those whom we have touched with compassion.

At this significant milestone of our journey we invite and embrace opportunities that can lead us to serve beyond and more. If you believe, you kindle the same spirit in your heart, step up to join the confluence and strengthen our beliefs in sharing the joy of caring and giving.

"A journey of thousand miles begins with the first step", the Grace Cancer Foundation team is motivated and geared to scale our mission in the conquest of cancer. We believe this can be achieved with divine blessings and joining steps further together.

FROM THE CHAIRMAN

B. L. Sujatha Rao

Inspector General of Police (retd)

We are proud to bring out this souvenir to commemorate GRACE CANCER FOUNDATION's 6th anniversary and celebrate 6 years of service. In the 6 years of its existence, GCF as an organization has grown enormously, conducted 372 screening camps, 125 free medical oncology camps, 138 free surgical oncology camps, and 25 EMF awareness camps, 75 cancer awareness camps in different places and has catered close to 6 Million people, including people living in very remote and inaccessible areas.

Over the years GRACE CANCER FOUNDATION's innovations in cancer screening and models of health care delivery have been adopted by other NGOs as well.

GRACE CANCER FOUNDATION has at all times striven to ensure that its work is not only effective, but fair and above board, and seen to be so by the community. It has also tried to strengthen communities to take charge of and be responsible for their own health as far as possible. It has educated people about their rights and encouraged them to act against myths of cancer.

We seek to spread the light of hope and care - wherever we find the darkness of anguish and despair. We endeavor, in humble way, to reach underprivileged rural folks and give them an encouraging new lease of life.

Dr. Chinnababu Sunkavalli, Dr. Hemanth Vudayaraju and Dr. Prameela Rani Sunkavalli are primarily responsible for achieving several mile stones that GCF can be proud of. My hearty congratulations to them.

As we celebrate 6 years of success during our anniversary, I wish to express my heartfelt thanks to our several partners who have reposed their faith in us. I would like to express our gratitude to all the International and National organizations, Government, Corporate bodies and other partners who have supported us, and all those who have helped us in our journey to this historic moment.

I am happy to say, we have been supported and encouraged by generous donors and a dedicated staff, due to which our expectations have been surpassed. Grace is on a mission, a mission that will change India and the world for the better.

Our Vision

Alleviating cancer burden in society through care, cure, compassion and commitment.

Our Mission

Dedicated health care professionals driving cancer **Education, Early detection, Screening, Treatment, Rehabilitation, Research** and Access to quality healthcare through outreach initiatives.

Success through transformative Social Change

- Educate the masses through cancer awareness camps, drive healthy life choices in pursuit of cancer prevention
- Screen risk age groups, detect and treat cancer in the early stages to save lives and lessen the financial burden on the families and state's healthcare system.
- Taking cancer screening and treatment to the doorstep of rural population through Mobile Cancer screening programmes
- Provide treatment to the underprivileged free of cost.
- Advocate the clinicians, researchers and patients in best possible ethical ways to expedite the development of new medicines and technologies that alleviate suffering of the patients.
- Work with government and international bodies to understand and address the root causes for cancer.

Our Belief

We believe that every person on earth, irrespective of their Social and Economic status, has equal right to treatment. We intend to create an organization that helps people around the globe in their quest to conquer Cancer.

OUR CORE VALUES

Care

We intend to render holistic approach so as to provide comprehensive care to the people. In addition we also support the patients and their families in taking informed right decisions regarding treatment options.

Cure

We believe cancer can be cured if detected early. Hence we prioritize early detection and screening for cancer. Multidisciplinary approach would provide best chance for cure.

Compassion

We focus on providing emotional support to the patients and their family members. We intend to provide extensive counseling sessions to cope with the trauma of living with Cancer. Our expert counselors and volunteers discuss and distribute cancer information materials, help the patients understand the situation, convince the patient and their family to make amicable adjustments in their lifestyle and educate them on cancer's treatment and side effects.

GRACE CANCER FOUNDATION

FOUNDERS

Sri. B L Sujatha Rao

Sri. B L Sujatha Rao is a retired IGP. In his tenure in the Police Department he served in various capacities in the Law & Order, Criminal Investigation, Anti-Corruption Bureau and Railway Department. For his meritorious service he received the India Police Medal.

Dr. Chinnababu

Dr. Chinnababu Sunkavalli is a practicing Robotic Surgical Oncologist in Apollo Hospitals Hyderabad. He has a wide experience in the field of Oncology. His expertise helps the foundation conduct various camps and awareness programs reaching out especially to the section of society where people cannot afford treatment and medication. He firmly believes in celebrating God's goodness and love.

Dr. Prameela Rani

Dr. Prameela Rani Sunkavalli is a Dentist and Founder Trustee of Grace Cancer Foundation. Through this NGO, Dr. Prameela has conducted 590 Mobile Cancer Screening Camps and Educated Women for self-breast examination and self-hygiene in preventing cervical cancer. She is actively overseeing the operations of Grace Cancer Foundation.

Dr. Hemanth Vudayaraju

Dr. Hemanth Vudayaraju is a practicing Robotic Surgical Oncologist in Apollo Hospitals Hyderabad. He has a wide experience in the area of Oncology. He has special interest in minimally invasive surgery. His clinical acumen helps the foundation, serve the most needy.

Dr. Kiran Avancha

Dr. Avancha is the Chief Operating Officer of Honor Health Research Institute (HRI) and the Associate Vice President of Research & Innovation at Honor Health. Through his expertise in Clinical Research he continues to guide the research activities of the Foundation.

ABOUT US

GRACE Cancer Foundation (Global Research and Cancer Education) is a nonprofit organization registered under section 25(1) of the company's act of India. Grace Cancer Foundation was founded with the vision to alleviate cancer burden through Education, Early detection, Treatment, Rehabilitation and cutting edge Research. We aim to provide CURE, CARE and COMPASSION with COMMITMENT in reaching the unreached. We aim at fighting cancer, and illuminating people's lives with hope, compassion and empathy.

The vision is carried out through our Mission- Dedicated health care professionals driving cancer Education, Early detection, Screening, Treatment, Rehabilitation, Research and Access to quality healthcare through outreach initiatives. We believe in Success through transformative Social Change.

What began as small group of doctors coming together to walk the extra-mile beyond their call of duty has evolved into a great team working in perfect harmony.

“Happiness doesn't result from what we get, but from what we give.”

It is through giving and serving that we truly get. We have always believed that where there is vision, there will be provision. Firstly, this vision was grasped by a few passionate doctors and humanitarians. We quickly became a team and ran with the vision.

The spark that was lit then has been burning ever since in our hearts... through the years it has been fuelled by personal touch and experience. All of us in the team have had family members and friends suffering with cancer. The impetus to the mobile screening campaign was kindled by legacy of Dr Chinnababu's mother (Smt. Asheerwadamma) who dedicated her life to social work. Interestingly, suffering brings people together and gives them a focus.

During this journey like-minded philanthropists and organizations pitched in their financial support.

Our status upgraded from being an NGO to transformative social enterprise. 2014 we received 12A and 80G income tax exemptions. Grace was granted with FCRA registration in 2018 making us eligible for receiving Foreign Donations.

We would like to achieve our vision with these 4 pillars as our goals.

- 1. Cancer Prevention-** by conducting awareness and screening camps, lifestyle modification, counseling and media campaigns.
- 2. Early detection-** by means of conducting mobile cancer screening camps, providing access to technology and educating public at large.
- 3. Treatment-** Provide cancer treatment to those who cannot afford cancer care. Thus far, the foundation has been referring the screen detected cases to network hospitals with govt insurance. The foundation also supports people in treatment decisions through Multi-disciplinary Approach.
- 4. Research-** Grace foundation pursues active research for alleviating the suffering of cancer patients. Clinsync is the CRO under which various Research and development activities take place.

The beginnings!

Grace Cancer Foundation was inaugurated on 15th December 2013 by the, then Director General of police Sri.Prasad Rao garu presiding as chief guest. Former director general of Police Sri Swaranjit sen was the Guest of honor at the occasion. Initially we focused on Cancer Awareness campaigns, more than 120 camps were organized across both states of Telangana and Andhra Pradesh. This endeavor could result in preventive Education strategy of our vision.

Mobile Cancer Screening Bus

Our Journey took a paradigm shift when State Bank of India donated a Mobile Cancer Screening Bus to us. We believe where there is a purpose there is a provision, this was the beginning of an era of taking Mobile cancer screening technology to the doorsteps of the unreached. The impetus to this campaign is personally related to Dr.Chinnababu as a legacy of his mother late Asheerwadamma, who was a pioneer in caring for the downtrodden and unreached section of society. The Bus is a small token of living her legacy. Today Grace has 4 fully equipped state of the art buses rendering service to the unreached.

The disease Burden

The WHO data says India will have 1.16 million new cancer cases this year and more than 50 per cent of these will be diagnosed in women. Or, precisely 17,204 more women will fall prey to the disease than men. Moreover, breast cancer incidence has gone up by 39.1 per cent between 1990 and 2016 and is the most common cancer among women in India, accounting for the largest crude incidence rate and prevalence of any cancer type.

While cancer in lip, oral cavity (16.1 per cent) and lung (8.5 per cent) are the most common in Indian men, in women they are most found in breasts (27.7 per cent) and cervix uteri (16.5 per cent).

- WHO says, 1 in every 10 Indian is at a risk of getting cancer before the age of 75
- Nearly 7 lakh Indians die of cancer every year
- Every year more than 10 lakhs are newly diagnosed with some form of the disease
- In our country breast cancer is becoming the leading killer. Even today more than 70% of patients present at an advanced stage. Breast accounts for 25% to 31% of all cancers in women in Indian cities.
- We are witnessing an AGE SHIFT, and the average age of developing breast cancer has shifted from 50-70 years to 30 - 50 years; and cancers in the young tend to be more aggressive.

Challenges and Road blocks

- Lack of awareness and Ignorance
- Limited access and reach to screening
- Low priority for Preventive healthcare
- Life style issues –Tobacco and Alcohol

We have conducted over 850 events including Awareness talks, Mobile Cancer Screening Camps, Free Surgical Oncology and Medical Oncology camps. It has been a humbling experience to see the joy on the faces of the people touched by Grace Cancer Foundation.

Out of the 850 events done thus far, the phenomenal impact on society is noteworthy.

Landscape of Cancer

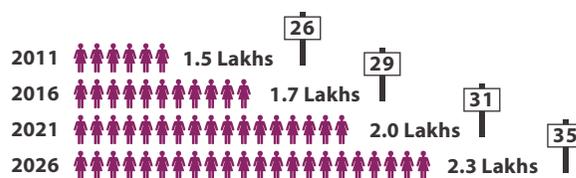

The pattern of burden of disease has changed over the last two decades globally including India. Non-communicable diseases (NCDs) contribute 62% to the mortality. Within NCDs, cancer is a major contributor to mortality burden, contributing around 12% to annual NCD mortality estimates, after cardiovascular and respiratory diseases. In terms of Disability Adjusted Life Years (DALYs), the cancer burden has more than doubled the highest across all therapy areas. As per ICMR data, India has 14 lakh cancer patients in 2016 and this number is expected to increase. Government of India, has laid down four priority cancers i.e. Breast Cancer, Cervical Cancer, and Oral Cancer and Lung cancer which together constitute 41% of cancer burden. Of these, breast cancer on most common cancer affecting Indian women currently accounts for 27% of total cancer incidence in women. Age adjusted rate for Breast cancer among Indian women is as high as 25.8 per 100,000 women and mortality 12.7 per 10,000 women. As compared to the global incidence Breast cancer in India is seen in relatively younger population and nearly 60% patients are diagnosed in advance stages. These trends imply a high economic burden due to the disease. In most medically advanced countries, launches of targeted therapies have improved the survival of advanced breast cancer patients from 1 year to 5 years, over the last few years. These newer therapies provide hope for longer, more productive lives for patients in India.

Keeping the above trends in mind, Grace cancer Foundation is spearheading the campaign of early diagnosis by screening across the country.

Of the common cancer types prevalent in India, oral cancer, cervical cancer and breast cancer collectively contributed approximately 34% to the total cancer burden and have been prioritized for prevention, control and screening under the NCD program by the Government of India.

Breast cancer is currently the most common cancer among Indian women, both in terms of incidence as well as mortality with proportional prevalence in younger age-groups being higher than the global average. Age standardized rate is approximately 25.8 per one lakh women and expected to rise to 35 per one lakh women in 2026.

Projected number of Breast Cancer patients in India

Note: Numbers in square represents estimated cases per lakh women

However this number could be an underestimate as at present only 15% of the population is covered by cancer registries. As per interviews with key stakeholders, there could be an under-reporting of nearly 50-100% varying with every state.

FEMALE BREAST CANCER – INCIDENCE.

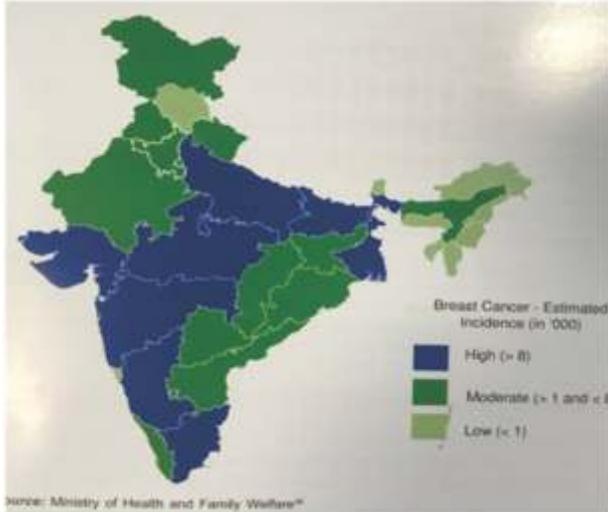

Breast cancer constituted approximately 27% of all newly diagnosed cancer cases and 21.5% of all cancer mortality in 2012 in India. In terms of age standardized rate, incidence of breast cancer is 25.8 per 1 lakh women and mortality is 12.7 per lakh women.

Top 5 cancer type by share of incidence and Mortality in Women in India (2012)³⁴

| Cancer Type | Incidence (%) | Mortality (%) | Rank by | |
|--------------|---------------|---------------|-----------------|-----------------|
| | | | Incidence share | Mortality share |
| Breast | 27 | 21.5 | 1 | 1 |
| Cervix uteri | 22.9 | 20.7 | 2 | 2 |
| Colorectal | 5.1 | 6.4 | 3 | 3 |
| Ovary | 5 | 6 | 4 | 4 |
| Stomach | 4.3 | 5.6 | 6 | 5 |

While breast cancer is the most common cancer among Indian women, its incidence is not uniform across all the states. Based on the breast cancer estimated incidence data published by Ministry of Health and Family Welfare in India (2017), IQVIA categorized the estimated numbers into three zones, as shown in the figure. States with incidence of 8,000 or more were categorized as high, those with incidence between 1000 and 8000 categorized as moderate and less than 1,000 were categorized as low. As can be observed, populous states like UP, Bihar, Madhya Pradesh, Gujarat and maharashtra have a higher incidence of breast Cancer.

ESTIMATED INCIDENCE OF BREAST CANCER IN INDIA-2016.

Note: High (>8)
Moderate (>1 and <8)
Low (<1)

Estimated incidence is based upon projected incidence rate and projected population (person year). Factors such as early age at menarche, late age at first childbirth, nulliparity, adoption of sedentary life style and changing dietary habits, with more focused on sugary food, no balanced diet less physical activity etc are likely to further contribute to increasing incidence of breast cancer. **According to a study by Dsouza N et al, incidence of breast cancer is expected to increase from current 1.5 lakh to 2.35 lakh by 2026.**

However, this is a conservative estimate of the cancer burden and the actual burden is likely to be higher as the estimate is based on registries which only cover approximately 15% of the Indian population. Experts believe the actual breast cancer incidence in India is likely to be 50-100% more than what is reported. Breast cancer diagnosis rate is conservatively estimated to be 57% implying high rate of under-diagnosis.

BREAST CANCER IN INDIA IS DIFFERENT FROM WESTERN WORLD

The profile of Indian breast cancer patients is significantly different from Western World in terms of parameters such as age at diagnosis, stage at diagnosis and histological subtypes. These factors play a critical role in management of breast cancer.

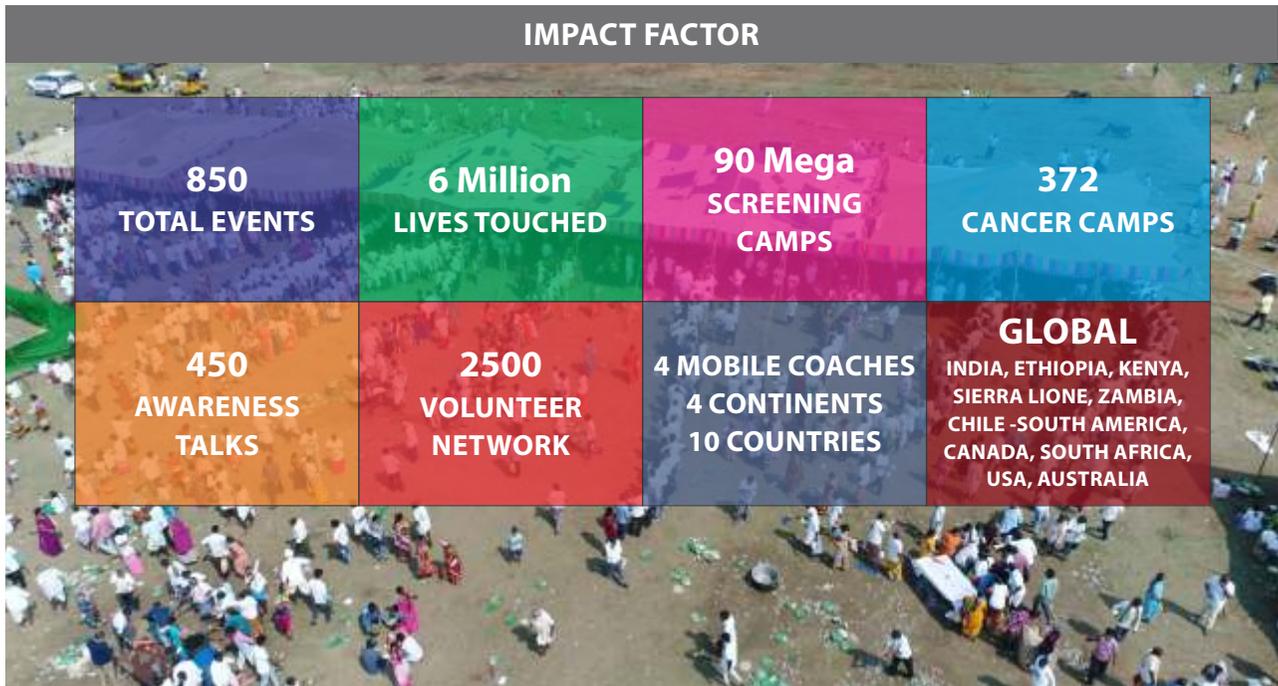

Age at Diagnosis

Indian breast cancer patients are relatively younger at diagnosis with nearly 48% of patients being diagnosed at less than 50 years of age. As per discussion with Oncologists, almost 50% of breast cancer patients first visit the doctor when they are in stage 3, and 15-20% of patients visit when they are in stage 4. A lot of patients are being diagnosed in their late 20s or early 30s as well. This is in sharp contrast to US and UK, where only 30% and 20% patients respectively are diagnosed at less than 50 years of age.

Studies have shown that breast cancer in younger age group is more aggressive, more likely to present with advanced stage at diagnosis and may be linked to hereditary causes. This trend is of concern from an economic perspective as well since these 48% women fall in the productive age group and have direct impact on the productivity of the country.

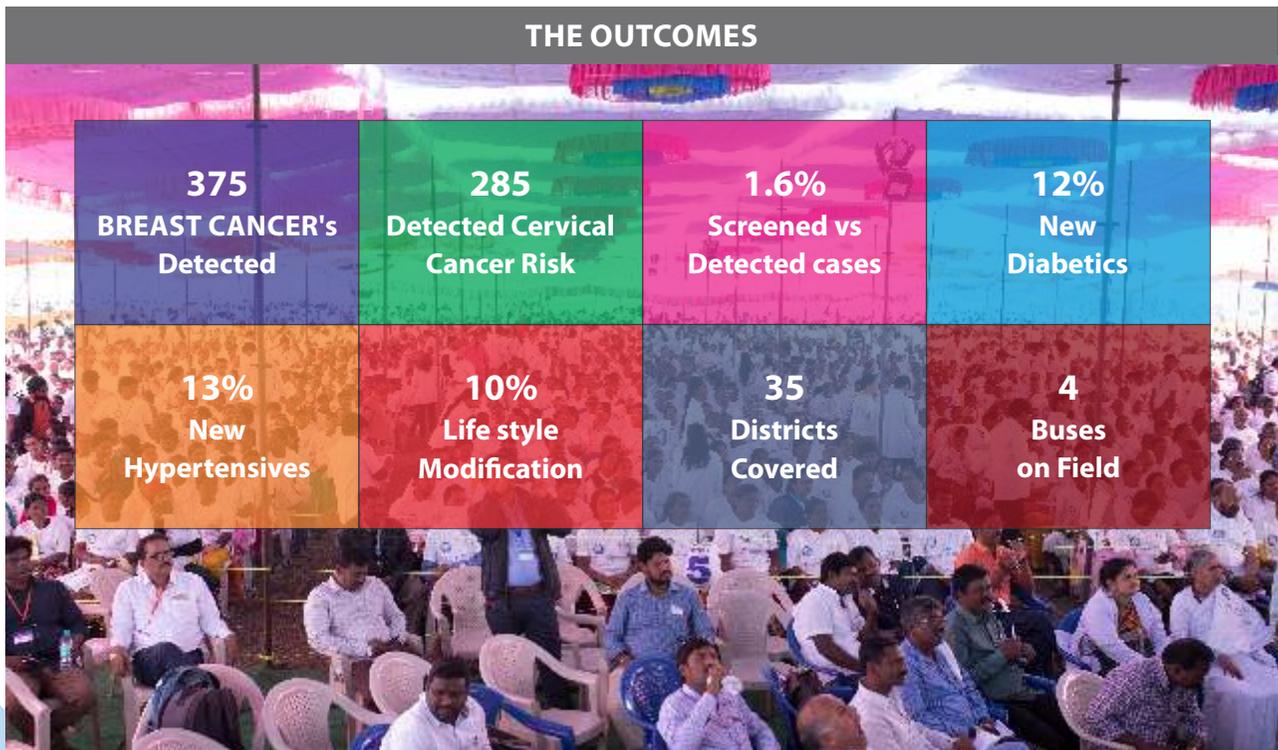

Key takeaway

- India's cancer burden has increased two folds since 1990
- Breast cancer is the most common cancer among Indian women
- Burden is predicted to further increase with increasing incidence
- Profile of Indian breast cancer patient is very different from West – younger age and late stage at diagnosis and higher prevalence of subtypes with poorer prognosis
- Percentage allocation of GDP to healthcare is very low in India
- Lack of resources as well as non-judicious utilization of resources are key challenges
- Reaching the unreached is the only way forward
- Sensitization of public is key
- Screening by means of door to door campaign is very effective
- Private players continue to be key providers due to infrastructure limitations in Government hospitals.
- Awareness and early detection by screening is immediate need.

The Mobile Cancer screening campaign has significantly made difference to the lives of underprivileged. Early detection has aided in saving lives.

The demand of the Mobile cancer screening Bus by Government and other NGO, s resonates with the pressing need for access and reach, more so in the rural areas of the state. Well-designed mobile health-care models have been successful in reaching the unreached and also in improving community awareness about different health interventions. Grace cancer foundation has closely worked with various agencies in reaching the unreached.

Conclusion

Since inception what we could achieve thus far is made possible with many hands that joined us all through. We can make meaningful and significant impact on the incidence of cancer as most of them are due to habits and lifestyle. Early detection and life style modification is the key for conquering cancer. We have begun this war against Cancer.

We can never be grateful enough for the number of professional and nonprofessional volunteers who sacrificially give up their time and energy to serve at our campaigns.

We make a living by what we get, but we make a life by what we give
– Winston Churchill

Many of you have partnered with us, some of you might want to partner with us. Mother Theresa said, **“We can become the hands of God”**. When we ponder at all that has been accomplished, sometimes we wonder, how on earth did all this happen? And we are quickly reminded of the very word Grace. Everything by His Grace. Volunteers do not necessarily have the time; they just have the heart.

We enter our 6th year of operation as a stronger foundation with better infrastructure (4 world class mobile screening buses) and enhanced ability to attract more volunteers and doctors to support this noble cause. As we touch this important milestone, we also renew our solemn pledge to be of service to the larger humanity – especially those who are less fortunate than many of us economically – by providing them with world class medical facilities at their doorstep to detect cancer early.

As always, we seek your continued support, wishes and participation.

Please join hands with us in this Pink Revolution.

Can I be a part of Grace Journey?

YES Approximately we see a fixed cost of Rs.10 lakhs per month with a capability to screen 300 people per day. 15 staff members will be available full time. This includes doctors, oncologists, nurses, technicians, coordinators and volunteers.

The estimated population that can be covered 10000 per month

Average cost of Rs 500-700 per patient for various screening tests

Mobile cancer screening bus equipped with Comprehensive Cancer screening and Diagnosis.

**CLINICAL EXAMINATION BY DOCTOR | BMI | CHEST X RAY | MAMMOGRAPHY | PAP SMEAR
FNAC | ECG | ULTRASOUND | TUMOR MARKERS CA 125, CEA | HEPATITIS B | HEPATITS C
URINE ROUTINE MICRO | FBS | MEDICINES/PHARMACY | GRBS**

Equipment available in the bus is as follows:

Mammography Machine, X-ray Machine, Ultrasonography, PAP SMEAR Facility, ECG Machine, Basic Lab for Urine Test, Sugars, Tumor Markers etc., CR for X-RAY Films Print, Clinical Examination Room for doctors, Necessary equipment to do FNAC, Large screen Television for spreading Awareness and prevention on common cancers, Speakers for public addressal, 25KVA Generator, Computers for data storage, Online radiology reporting system

CITY RUNS TO INCREASE AWARENESS ABOUT CANCER

Around 10,000 participants in Hyderabad, including 200 cancer survivors, joined the world's largest cancer awareness run - which is being held across four continents, four countries and 10 cities - flagged off at Necklace Road on Sunday. The 'Cancer Run' with the theme 'Let us outrun cancer' was organised by Grace Cancer Foundation and was sponsored by Microsoft. "The response for this run was overwhelming. There is a need to create awareness about the disease and mass events with large number of youth and elders participating, like this one, play a crucial role in achieving that goal," said VC Sajjanar, Commissioner of Police, Cyberabad, while flagging-off the run.

Thousands take part in cancer run in city

HANS NEWS SERVICE. Hyderabad: Thousands took part in the 2k fun walk/run, 5k run/walk and 10k run, organised by Grace Cancer Foundation in the city on Sunday. This year, the run was being organised not just in Hyderabad, but in many cities across the globe, including Los Angeles, Sydney and in Chile.

VC Sajjanar, commissioner of police at Cyberabad, flagged off the run. Cancer is the second most dreaded disease. Over one crore people die due to cancer all over the world, every year. There is a need to create awareness about the disease and mass events with large number of youth and elders participating, like this one, will play a crucial role in achieving that goal, he said. Over 200 cancer survivors took part in the run.

TRUE STORIES

Yashoda Perala was affected with cancer in early 2013. But she could not afford treatment neither did she know where to go and whom to approach. During this time Grace Cancer Foundation (GCFD) conducted a free health camp at her village in Nalgonda district of Telangana State. Yashoda was found to have cervical cancer which needed immediate attention. GCFD identified a cancer center at a nearby district and initiated the treatment for Yashoda.

They began the chemotherapy and provided her with the needed medicines. 50 year old Yashoda was greatly relieved from her physical pain as well as emotional pain. She is so grateful to GCFD for the timely intervention and support that was provided.

A 25 yr. old man from Kakinada had approached a hospital and was diagnosed to have carcinoma tongue - a chain smoker who had the habit of chewing tobacco. The doctors had advised surgery. The man could not afford a surgery due to his financial situation. He returned back to his native only to come back to the hospital after 4 months with metastatic disease - the cancer had spread! The doctors could only do a palliative surgery. But the patient succumbed to the disease. His parents could not even afford to take his body back to their native place. If only he was counselled at an early age, if only the symptoms could have been detected early.....
